

The ASDAN Register — Staff Guide

What this is. A free tool for running an ASDAN provision day to day: it takes the lesson register, banks pupils' hours towards their credits automatically, stores photo evidence of their work, and prints claim paperwork with your school's header already on it. It now covers all three pathways on the site — BUILD, GROW and LAUNCH (79 lessons in total).

The promise — please read first

Everything lives on the device you use it on. Nothing is uploaded, there are no accounts, and no pupil data ever leaves the room. That also means: always use the same device (the classroom iPad or laptop), and move data between devices only with a backup file (page 3).

Getting started

- 1. Open the app.** Go to madebymatt.uk/asdan/app.html on the classroom device and add it to the home screen or bookmarks. After the first visit it keeps working even when the Wi-Fi doesn't.
- 2. Fill in the centre details.** Tap Settings. Under Centre details, enter your centre name, ASDAN centre number and tutor name — these print on every document.
- 3. Set your school header.** Under Paperwork branding, tick "Show school header" and type your school's name. Every printed document then carries it, ready for the school file.

Pick a pathway (the quick-start)

On the **Programmes** page, **Pathway quick-start** seeds BUILD, GROW or LAUNCH in one tap: it creates a Short Course for each strand and a lesson slot for each, using the real strand names and lesson minutes from the schemes of work. Your existing programmes and slots are never touched, and no pupils, credit values or unit codes are added — you fill those in from your own ASDAN documents.

What each pathway is working toward. BUILD — an **Award** (ASDAN Short Courses and AQA Unit Award, plus personal-challenge unit awards). GROW — a PEQ **Extended Award** (Entry 3 floor). LAUNCH — a PEQ **Level 1 Certificate** (its full-year scheme homes all six Level 1 PEQ units; Autumn 1 banks Communication skills, ComSk1). These targets are **provisional**: unit and level are the coordinator's decision, and nothing is promised to a learner until the ASDAN registration is confirmed.

One-time setup: terms and lesson slots

- 1. Add the terms.** Settings → Terms: each term's name and dates. Courses carry on across terms — credits always count the whole course; terms just organise the register and the printouts.
- 2. Check the lesson slots.** Settings → Lesson slots: the quick-start filled these in for your pathway — set the real days each runs and adjust the lesson length if yours differs. These slots become the Today page each morning.
- 3. Pupils and programmes.** Add pupils under Pupils, enrol them onto programmes under Programmes — set these up once with whoever leads your provision.

During the lesson — the Today page

The app opens on Today: the current term, today's lesson slots, and every enrolled pupil as a large tile. This page is the register.

Taking the register

1. **Tap a pupil once — PRESENT (green).** Their full lesson minutes are banked towards their credits automatically. 10 hours = 1 ASDAN credit, so every register mark is real progress.
2. **Tap again — LATE (amber).** Half the lesson's minutes are banked.
3. **Tap again — ABSENT (grey).** No minutes banked.
4. **Tap once more — the mark clears** (made a mistake? just keep tapping round).

The point of all this

Marking the register is the hours paperwork. There is nothing to write up afterwards — the credit tallies, readiness board and printouts all update from these taps.

The small extras on each tile

1. **The corner dot** cycles an engagement RAG — green / amber / red — for your own notes on how the session went. It doesn't change the attendance mark.
2. **The session note** under each slot is a one-line note ("worked outside, group task"). Optional, saved as you type.
3. **Projector privacy** — the tick-box at the top right. Turn it on whenever the screen is on the board: surnames become initials.

The "Needs attention" panel

Under the register, the app quietly flags what matters: a pupil less than two hours from their next credit, anyone with hours but no evidence yet, and anyone with no new evidence in a fortnight. If it says "Nothing outstanding" — the paperwork is keeping up with the teaching.

Evidence, printing & keeping it safe

Capturing evidence

When a pupil produces something worth keeping, open Programmes, choose the programme and the challenge it belongs to, and add a work example — a photo straight from the device camera, with the pupils involved ticked and a one-line caption. The app assigns an evidence reference automatically and it appears in that pupil's portfolio from then on.

Printing the paperwork

1. Open Print & PDF and choose the programme and pupil.
2. Pick the document: Portfolio audit, Hours tally (with a by-term breakdown and the whole-course total the credits come from), or Tutor record.
3. Print or save as PDF. Every document opens with your school's header, the centre line, and — when a pathway is set — a one-line note of what the learner is working toward, marked provisional.

Backups — the one habit that matters

1. **Once a week** (Friday is perfect): Settings → Export backup. One file, containing everything — pupils, hours, evidence photos, the register, and your chosen pathway.
2. Keep it in your school's usual secure storage.
3. **To restore or move devices:** Settings → Import backup on the new device. It replaces what's there, completely — and an older backup from before the pathways update still imports cleanly.

Golden rules

- Same device every lesson — the data lives there, nowhere else.
- Tap the register every session — it's the whole hours record.
- Privacy toggle ON when the screen's on the board.
- Export a backup every Friday.
- Credits count the whole course — nothing resets between terms.
- Unit, level and pathway are the coordinator's call — agree changes with your provision lead, and promise a learner the work, never the certificate.
